

Overview

I am unable to use GitHub Azure Metered Billing because it requires an organization account connected to a valid Azure subscription.

What I Did

- Subscribed to Microsoft 365 and registered my domain.
- Set up Microsoft Entra ID for the tenant.
- Created a new user account using my custom domain:
avenir@theavenir.dev
- Attempted to log in to GitHub and connect Azure billing, but GitHub returned the error: "Cannot find any Azure subscription."

Troubleshooting Steps Taken

- Removed my personal account (franzbaes69) from the Azure subscription IAM.
- Added avenir@theavenir.dev to the subscription instead.
- Retried the GitHub Azure billing setup, but the issue still persisted.

Discovery

I found that the avenir@theavenir.dev account identity is still linked to the original tenant identity: *franzbaes69gmail131.onmicrosoft.com*

Because of this, the Azure subscription and tenant ownership still appear to be associated with the original account rather than the new domain account.

Goal

1. Fully remove franzbaes69 from the tenant.
2. Transfer ownership of:
 - the Azure subscription,
 - Azure credits,
 - and directory/tenant ownership to avenir@theavenir.dev.
3. Ensure GitHub recognizes the Azure subscription for metered billing under the new organizational identity.
